Low-Power, High-Speed CMOS Analog Switches

DESCRIPTION

The DG401B, DG403B, DG405B monolithic analog switches are replacements for the popular DG401, DG403, DG405 analog switches and provide improved performance, combining high speed (t_{on}: 100 ns, typ.) with low power consumption make the DG401B series ideal for portable and battery powered applications.

Built on the Vishay Siliconix proprietary high-voltage silicon gate process to achieve high voltage rating and superior switch on/off performance, break-before-make is guaranteed for the SPDT configurations.

Each switch conducts equally well in both directions when on, and blocks up to 30 V peak-to-peak when off. On-resistance is very flat over the full ± 15 V analog range. The DG401B has two independent SPST switches. The DG403B has four SPST switches in NO/NC combinations. The DG405B has four switches in two SPST pairs (see Functional Block Diagrams and Pin Configurations)

The DG401B, DG403B, DG405B is available in both 16-pin plastic dip and 16-pin SOIC packages.

As a committed partner to the community and the environment, Vishay Siliconix manufactures this product with the lead (Pb)-free device terminations. For analog switching products manufactured with 100 % matte tin device terminations, the lead (Pb)-free "-E3" suffix is being used as a designator.

FEATURES

- 44 V supply max rating
- ± 15 V analog signal range
- On-resistance - $R_{DS(on)}$: 23 Ω
- Low leakage - $I_{D(on)}$: 40 pA
- Fast switching - t_{on}: 100 ns
- Upgrade to DG401B, DG403B, DG405B
- TTL, CMOS compatible
- Single supply capability

APPLICATIONS

- Audio and video switching
- Sample-and-hold circuits
- Test equipment
- PBX, PABX

BENEFITS

- Wide dynamic range
- Break-before-make switching action (DG403B only)
- Simple interfacing

ORDERING INFORMATION

STANDARD COMMERCIAL PART NUMBER	LEAD (Pb)-FREE COMMERCIAL PART NUMBER	PACKAGE	TEMP. RANGE
DG401BDJ	DG401BDJ-E3	16-pin plastic Dip	-40 °C to +85 °C
DG403BDJ	DG403BDJ-E3		
DG405BDJ	DG405BDJ-E3		
DG401BDY	DG401BDY-E3	16-pin narrow SOIC	
DG403BDY	DG403BDY-E3		
DG405BDY	DG405BDY-E3		
DG401BDY-T1	DG401BDY-T1-E3	16-pin narrow SOIC with tape and reel	
DG403BDY-T1	DG403BDY-T1-E3		
DG405BDY-T1	DG405BDY-T1-E3		

ABSOLUTE MAXIMUM RATINGS (T_A = 25 °C, unless otherwise noted)

PARAMETER		LIMIT	UNIT
V+ to V-		44	V
GND to V-		25	
Digital inputs [a], V_S, V_D		(V-) - 0.3 V to (V+) + 0.3 V or 30 mA, whichever occurs first	
Continuous current (any terminal)		30	mA
Peak current, S or D (pulsed at 1 ms, 10 % duty)		100	
Storage temperature	(DJ, DY suffix)	- 65 to +125	°C
Power dissipation (package) [b]	16-pin plastic DIP [c]	450	mW
	16-pin SOIC [d]	600	

Notes

a. Signals on S_X, D_X, or IN_X exceeding V+ or V- will be clamped by internal diodes. Limit forward diode current to maximum current ratings
b. All leads welded or soldered to PC board
c. Derate 6 mW/°C above 75 °C
d. Derate 7.6 mW/°C above 75 °C

Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Notes

a. Refer to PROCESS OPTION FLOWCHART
b. Room = 25 °C, full = as determined by the operating temperature suffix
c. Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing
d. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this datasheet
e. Guaranteed by design, not subject to production test
f. V_{IN} = input voltage to perform proper function

SCHEMATIC DIAGRAM (typical channel)

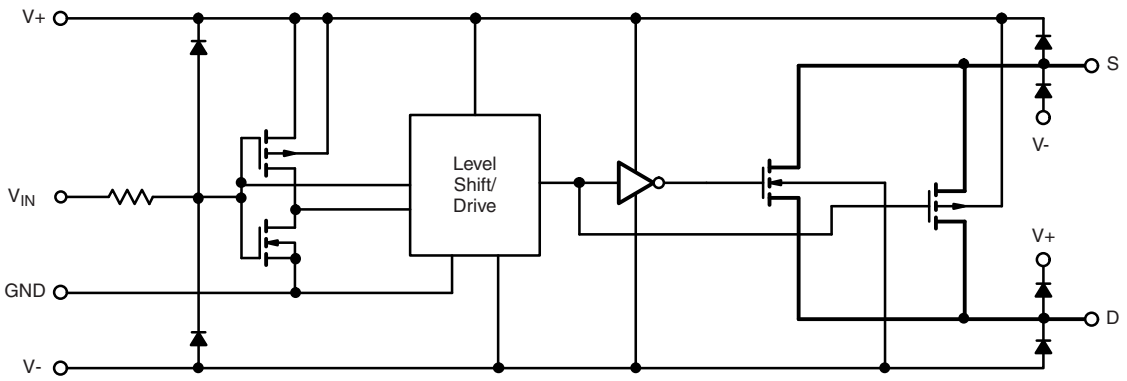

Fig. 1

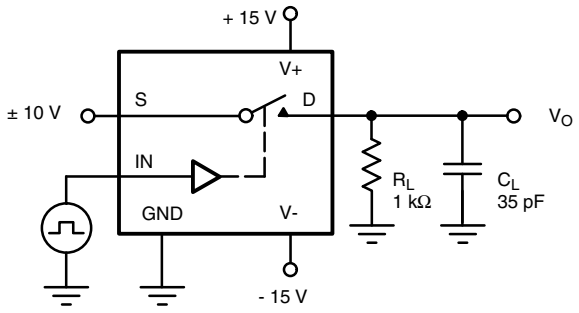
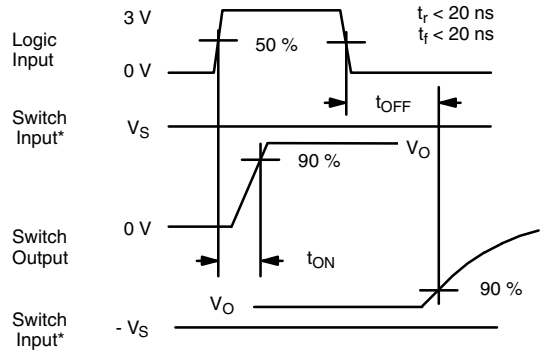
TEST CIRCUITS

V_O is the steady state output with the switch on. Feedthrough via switch capacitance may result in spikes at the leading and trailing edge of the output waveform.



C_L (includes fixture and stray capacitance)

$$V_O = V_S \frac{R_L}{R_L + R_{DS(on)}}$$



* V_S = 10 V for t_{ON}, V_S = - 10 V for t_{OFF}

Note: Logic input waveform is inverted for switches that have the opposite logic sense control

APPLICATIONS

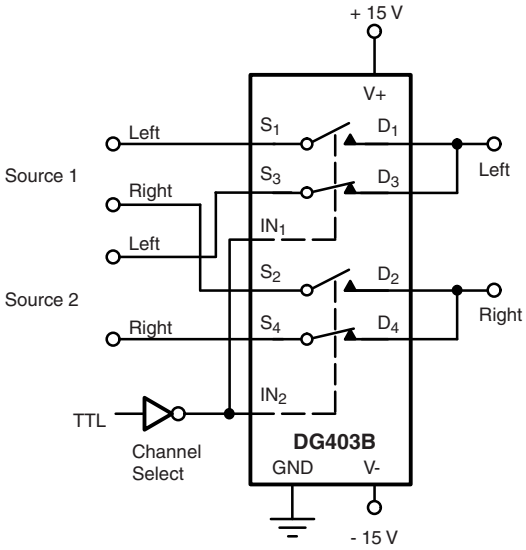

Fig. 9 - Stereo Source Selector

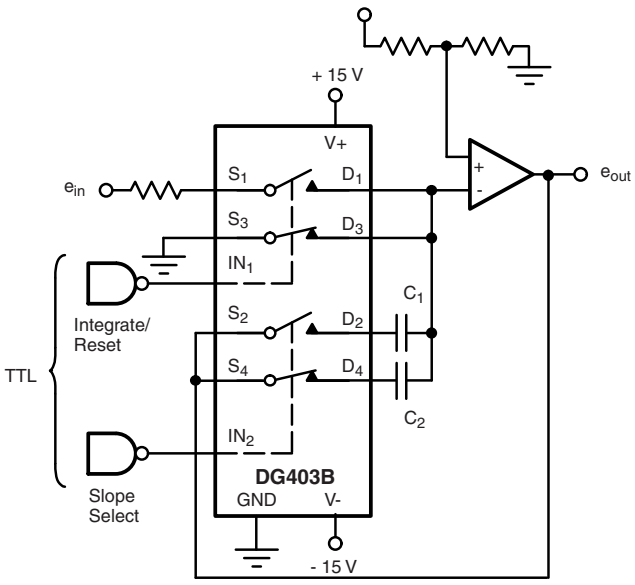

Fig. 10 - Dual Slope Integrator

Dual Slope Integrators

The DG403B is well suited to configure a selectable slope integrator. One control signal selects the timing capacitor C_1 or C_2. Another one selects e_{in} or discharges the capacitor in preparation for the next integration cycle.

Band-Pass Switched Capacitor Filter

Single-pole double-throw switches are a common element for switched capacitor networks and filters. The fast switching times and low leakage of the DG403B allow for higher clock rates and consequently higher filter operating frequencies.

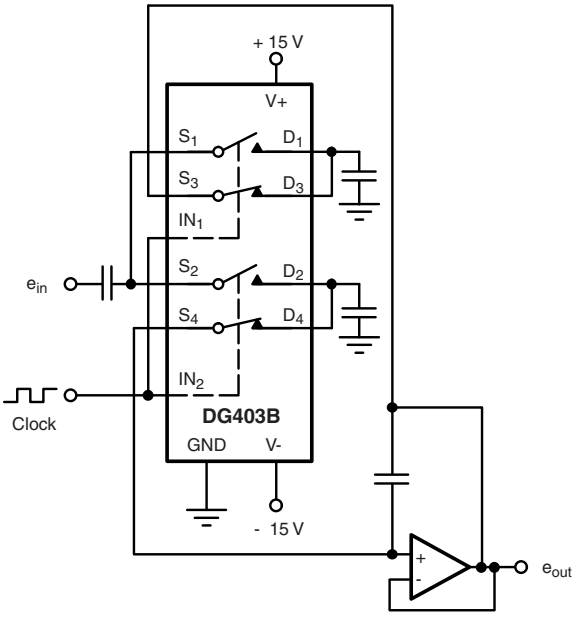

Fig. 11 - Band-Pass Switched Capacitor Filter

Peak Detector

A_3 acting as a comparator provides the logic drive for operating SW_1. The output of A_2 is fed back to A_3 and compared to the analog input e_{in}. If $e_{in} > e_{out}$ the output of A_3 is high keeping SW_1 closed. This allows C1 to charge up to the analog input voltage. When e_{in} goes below e_{out} A_3 goes negative, turning SW_1 off. The system will therefore store the most positive analog input experienced.

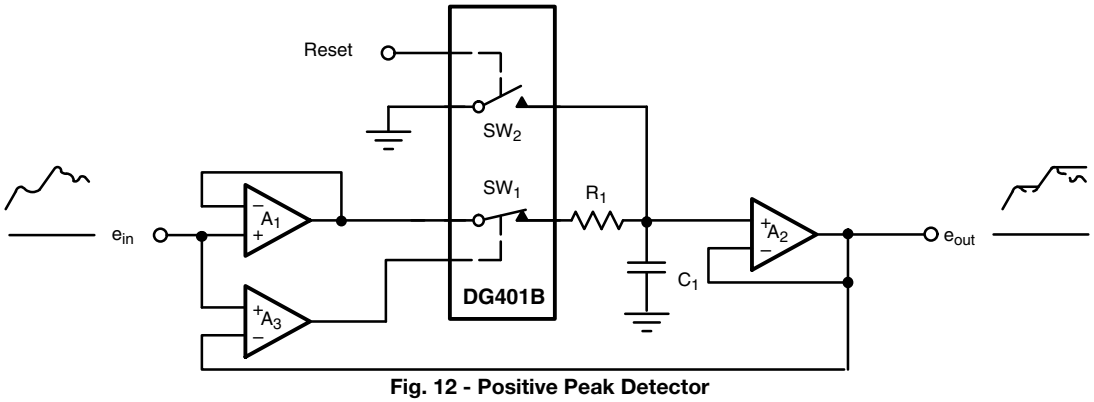

Fig. 12 - Positive Peak Detector
