SuperTan® Wet Tantalum Capacitors With Hermetic Seal

LINKS TO ADDITIONAL RESOURCES

Vishay ST represents a major breakthrough in wet tantalum capacitor technology. Its unique cathode system provides the highest capacitance per unit volume. The design facilitates a doubling of capacitance, lower ESR and higher ripple current rating compared with conventional wet tantalum products. Moreover, the ST has the capacitance stability of a solid tantalum capacitor and there are no circuit impedance restrictions.

The ST is housed in an all tantalum, hermetically sealed case and is manufactured to withstand hazardous environments. The ST is used widely in the defense and aerospace industries and whenever there is a space problem.

PERFORMANCE CHARACTERISTICS

Operating Temperature: -55 °C to +85 °C (to +125 °C with voltage derating)

Capacitance Tolerance: at 120 Hz, +25 °C. \pm 20 % standard. \pm 10 % available as special.

FEATURES

- · Very high capacitance
- 10 μF to 2200 μF
- 25 V_{DC} to 125 V_{DC}
- Very low ESR
- High ripple current
- · All tantalum case
- · Hermetically sealed
- Low DCL
- Axial through-hole terminations: standard tin / lead (Sn / Pb), 100 % tin (RoHS-compliant) available
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

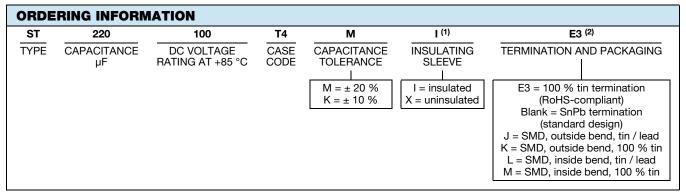

Note

* This datasheet provides information about parts that are RoHS-compliant and / or parts that are non RoHS-compliant. For example, parts with lead (Pb) terminations are not RoHS-compliant. Please see the information / tables in this datasheet for details

APPLICATION NOTES

- a. No continuous reverse voltage permissible.
- b. The peak of the applied AC ripple and the applied DC voltage must not exceed the DC voltage rating of the capacitor.
- c. Ripple current ratings by part number at 85 °C and 40 kHz are included in the table. Ripple current correction factors for other temperatures and frequencies are given on the next page.
- d. Transient reverse voltage surges are acceptable under the following conditions:

the peak reverse voltage does not exceed 1.5 V and the peak current times the duration of the reverse transient does not exceed 0.05 As. In addition, the repetition frequency of the reverse voltage surge is less than 10 Hz.

Notes

Revision: 26-Mar-2024

- Packaging: The use of formed plastic trays for packing bulk components is standard. Tape and reel cannot be used due to unit weight
- (1) Sleeve on J, K, L, M terminations shall be Kapton only
- (2) J, K, L, M are available in T4. For all other case sizes, check with marketing

TYPICAL PERFORMANCE CHARACTERISTICS OF ST CAPACITORS

ELECTRICAL CHARACTE	RISTICS							
ITEM	PERFORMANCE CHARACTERISTICS							
Operating temperature range	-55 °C to +85 °C (to +125 °C with voltage derating)							
Capacitor tolerance	± 20 %, ± 10 % at 120 Hz, at +25 °C							
Capacitor change by temperature	Limit per Standard Ratings table							
ESR	Limit per Standard Ratings table, at +25 °C, 120 Hz							
Impedance	Limit per Standard Ratings table, at -55 °C, 120 Hz							
DCL (leakage current)	Limit per Standard Ratings table							
AC ripple current	Limit per Standard Ratings table, at +85 °C and 40 kHz							
Reverse voltage	There shall be no continuous reverse voltage. Transient reverse voltage surges are acceptable under the following conditions: a) The peak reverse voltage is equal to or less than 1.5 V and the product of the peak current times the duration of the reverse transient is 0.05 As or less b) The repetition rate of the reverse voltage surges is less than 10 Hz							
Surge voltage	Surge voltage shall be in accordance with MIL-PRF-39006 and Table II of DSCC93026. The DC rated surge voltage is the maximum voltage to which the capacitors can be subjected under any conditions including transients and peak ripple at the highest line voltage. The DC surge voltage is 115 % of rated DC voltage.							

PERFORMANCE CHARACTERISTICS						
ITEM	PERFORMANCE CHARACTERISTICS					
Life testing	Capacitors shall be capable of withstanding a 2000 h life test at a temperature +85 °C at rated voltage, or a 2000 h life test at 125 °C test at derated voltage. After the test, the capacitors shall meet the following requirements:					
	 a) DC leakage at 85 °C and 125 °C shall not exceed 125 % of the specified value b) DC leakage at 25 °C shall not exceed the specified value 					
	c) Capacitance shall be within +10 %, -20 % of initial value					
	d) ESR shall not exceed 200 % of the specified value					

Vishay

ENVIRONMENTAL CHARACTERISTICS									
ITEM	CONDITION	COMMENTS							
Seal	MIL-PRF-39006	When the capacitors are tested as specified in MIL-PRF-39006, there shall be no evidence of leakage.							
Moisture resistance	MIL-PRF-39006	Moisture resistance shall be in accordance with MIL-PRF-39006. Number of cycles: 10 continuous cycles							
Barometric pressure (reduced)	MIL-STD-202, method 105, condition E	Altitude 150 000 feet							

MECHANICAL CHARACTERISTICS									
ITEM	TEST METHOD	CONDITION							
Shock (specified pulse)	MIL-STD-202, method 213	Test condition I (100 g)							
Vibration, high frequency	MIL-STD-202, method 204	Test condition D (20 g peak)							
Thermal shock	MIL-STD-202, method 107	Test condition A, 30 cycles							
Solderability	MIL-STD-202, method 208	ANSI/J-STD-002, test A Solderability shall be in accordance with MIL-PRF-39006.							
Terminal strength	MIL-STD-202, method 211	Terminal strength shall be in accordance with MIL-PRF-39006.							
Resistance to solder heat	MIL-STD-202, method 210	Test condition C The capacitors shall meet the requirements of MIL-PRF-39006.							
Terminals	MIL-STD-1276	Terminals shall be as specified in MIL-STD-1276. The length and diameter of the terminals shall be as specified in Dimensions table. All terminals shall be permanently secured internally and externally, as applicable. All external joints shall be welded.							
Marking	MIL-STD-1285	Marking of capacitors conforms to method I of MIL-STD-1285 and include capacitance (in μF), capacitance tolerance letter, rated voltage, date code, lot symbol and Vishay trademark.
