

Optocoupler, Phototransistor Output, With Base Connection in SOIC-8 Package

8 NC

7 B

6 C

FEATURES

- Isolation test voltage, 4000 V_{RMS}
- Industry standard SOIC-8 surface mountable package

- · Compatible with dual wave, vapor phase and IR reflow soldering
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

DESCRIPTION

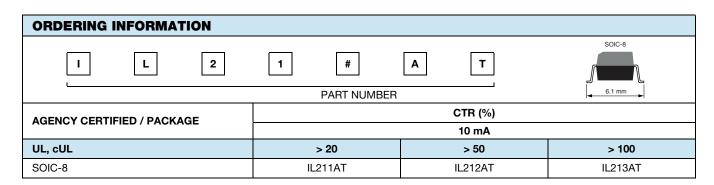

The IL211AT, IL212AT, IL213AT are optically coupled pairs with a GaAs infrared LED and silicon NPN phototransistor. Signal information, including a DC level, can be transmitted by the device while maintaining a high degree of electrical isolation between input and output.

The IL211AT, IL212AT, IL213AT comes in a standard SOIC-8 small outline package for surface mounting which makes it ideally suited for high density applications with limited space. In addition to eliminating through-holes requirements, this package conforms to standards for surface mounted devices.

A choice of 20 %, 50 %, and 100 % minimum CTR at I_F = 10 mA makes these optocouplers suitable for a variety of different applications.

Isolation test voltage		V _{ISO}	4000	V _{RMS}			
Total package dissipation	LED and detector	P _{tot}	240	mW			
Derate linearly from 25 °C			3.2	mW/°C			
Storage temperature		T _{stg}	-55 to +150	°C			
Operating temperature		T _{amb}	-55 to +100	°C			
Soldering time	At 260 °C		10	s			

Note

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. Functional operation of the device is not
implied at these or any other conditions in excess of those given in the operational sections of this document. Exposure to absolute
maximum ratings for extended periods of the time can adversely affect reliability.
